Dear Neil:

Thank you very much for your letter of November 17. I am glad you like the sequences. I wrote to Frank Harary recently and mentioned the problem which gave rise to sequence No. 321.* He believes that this problem had already been solved, so I am writing around to find out if this is the case. If I find that this solution has already appeared in the literature I will let you know, so that you can give credit to whomever it was that got there first!

I shall be in Toronto on December 6, but on December 7 I shall be at the University of Waterloo all day. I hope it will be possible for us to see each other for a while then, and I look forward to that.

Yours sincerely,

R.C. Read

RCR/js

* I have since found out that this problem has indeed been solved, and by none other than yourself! (in your paper with Mallows).
Oh, well, you can't win them all!
