

July 2, 1970

Dear Neil

I have just noticed - in the paperback of Louis Comtet's Analyse Combinatoire, Tome Premier which he just sent me (remember you borrowed the miss. some time back.) - that he has a problem giving the numbers

1192 J

n	1	2	3	4	5	6	7	8	9	10
f _n	1	1	2	9	88	1802	75598	6421599	1097780312	376516036188

which is not in your list.

The problem is based on the paper The number of full sets with n elements, Richard Piddicord, Proc. Amer Math Soc 13 (1962), 825-828

Piddicord is a remarkable young man in my book; he acknowledged the help I gave him publicly! +

John

+ This may sound more than a little paranoid, but in fact there are a number of young and not so young men who didn't. It goes without saying that you are also a remarkable young man in my book - for more than the reason mentioned above

Does the paper give the full sequence?
